this volume contains 11 thoroughly refereed and revised papers detailing recent advances in research on designing trading agents and mechanisms for agent mediated e commerce they were originally presented at the joint workshop on trading agent design and analysis tada 2012 and agent mediated electronic commerce amec 2012 co located with aamas 2012 in valencia spain in june 2012 the increasing reliance on software agents has created a range of pressing new research challenges including the design of appropriate agent decision algorithms approaches for predicting the complex behaviors and interactions of multiple agents including the computation of equilibria and the engineering of protocols and mechanisms that ensure electronic markets behave in a stable manner or fulfill other desirable criteria drawing upon a diverse range of scientific disciplines including computer science economics artificial intelligence operations research and game theory

the papers collected in this volume represent a cross section of recent research and cover topics such as strategies for individual trading agents the design of markets and interaction protocols between agents and a variety of applications

in agent based modeling the focus is very much on agent based simulation as simulation is a very important tool for agent based modeling we also use agent based simulation in this book with a stress on the mathematical foundation of agent based modeling we introduce two original mathematical frameworks a theory of sld social learning dynamics and an axiomatic theory of economic exchange exchange algebra among agents exchange algebra gives bottom up reconstruction of sna system of national accountings sld provides the concept of indirect control of socio economic systems to manage structural change and its stability we also compare agent based simulation with gaming simulation and investigate the epistemological foundation of agent based modeling

differentiated services one of the hottest topics in networking will help network engineers prioritize network traffic this book explores the technical specifications of differentiated services as developed and defined within the internet engineering task force ietf standards body

selected papers from the specialist seminar of the adelaide international teletraffic congress are presented in this book together they give an excellent sample of the work being done around the world to define and meet the new challenges in teletraffic theory and practice although many questions are answered here the papers pose many more problems which are still to be solved many papers present methods for solving problems that will remain difficult even as computing speed increases exponentially the methods used include heuristic and ai approaches approximations simplifications new approaches to numerical analysis and simulation and some new techniques borrowed from other disciplines while some problems are hard to solve because of complexity others are difficult because of uncertainty some forms of uncertainty may be quantified and dealt with by using probability theory many examples may be found in this volume further papers show that stationary stochastic processes are now being challenged as other models are also tried
