Calculus Refresher for the FE Exam was written in response to the requests of countless FE candidates. The author provides background theory, clear explanatory text, relevant examples, and FE style practice problems with solutions.

there's nothing like experience in solving problems to improve performance on the chemical engineering PE exam. The chemical engineering practice exam set consists of six eight-hour representative examinations, each with 20 problems, enough to offer plenty of problem-solving practice. All solutions are provided. This edition incorporates numerous corrections to the text and equations. Problems are typeset and solutions are neatly handwritten.

The FE exam, the first in the two-part engineering licensing process, is taken typically by upper-level students or recent graduates in April or October. This eight-hour exam is closed book, except for a handout provided in the examination room. The exam is divided into morning and afternoon sessions. The morning exam, with 120 multiple-choice problems, is the same for everyone. In the afternoon, examinees must choose to take a discipline-specific exam or a general exam, each with 60 multiple-choice problems. Discipline-specific reviews are used to study for the afternoon discipline exams.

The only book that prepares you for the fire protection question on the mechanical PE exam, *Fire and Explosion Protection Systems*, is designed specifically to help you review for the tough fire protection question you'll encounter on the mechanical engineering PE exam. Written by the author of the best-selling mechanical engineering reference manual, this handbook covers the important codes, standards, and procedures that may be tested on the PE exam. The text emphasizes commercial fire protection systems, as does the exam, and includes a list of terms, formulas, and excerpts from National Fire Protection Association publications to speed and enhance your preparation.
